**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1 and 6 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2 and 1, respectively, of U.S. Patent No. 6,736,437 in view of Schaum. Claims 1 and 6 of the instant application are substantially similar to claims 2 and 1, respectively, of U.S. Pat. No. 6,736,437 except the claims of the instant application recite retaining slots in the flat support member through which the support strap is threaded. Schaum show a rigid cradle (10) having a plurality of retaining slots (16,17) therein through which supports cords (13,14,15) are threaded. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide at least two slots through the cradle assemblies claimed in U.S. Pat. No. 6,736,437, rather than attaching retaining sleeves to the bottoms thereof, as taught by Schaum as a more efficient means of retaining the support straps.

Art Unit: 3652

3. Claims 2-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 2 of U.S. Patent No. 6,736,437 in view of Schaum and Hart. Hart shows a mattress carrier having handles (20) formed by sewing the ends of a Nylon strap member onto itself in a crisscross pattern (see Fig. 3). It would have been obvious to form the handles of the support strap of U.S. Pat. No. 6,736,437 into loops by sewing the ends thereof onto itself as shown old in the Hart patent as a cost effective means of creating a durable handle out of the existing material of the strap.

### ***Specification***

4. The abstract of the disclosure is objected to because it more than one paragraph in length. Correction is required. See MPEP § 608.01(b).

5. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: There is no disclosure in the specification of the cradle assemblies being "integrally-molded of plastic" as is called for in claim 3.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stewart and Fler show cradle assemblies having cord receiving slots therethrough.
